The chart displays the distribution of execution times for all submissions. A large blue bar indicates the user's solution is instantaneous (0ms). Other bars are very small and clustered near the 1ms mark.

The chart displays the distribution of execution times. The y-axis represents percentage from 0% to 30%, and the x-axis represents time in milliseconds from 0ms to 20ms. The distribution is highly skewed, with most executions (around 100%) occurring between 0ms and 10ms.

The timeline shows memory usage starting at approximately 27.57 MB and remaining relatively stable thereafter. The x-axis marks 10ms and 20ms.
